

## Large Residential & Commercial Water Treatment Systems

Large residential and commercial construction projects in the Caribbean present unique challenges for the most accomplished project owners, architects and contractors. Construction project success depends on cost-effective sourcing and highly coordinated delivery of materials and equipment to the project on schedule and on budget.

As the only full service water treatment technologies company in the Bahamas, **PureH<sub>2</sub>O, Ltd.**® offers construction project owners, architects and contractors water treatment solutions for any size residential or commercial project. Through our Integrated Project Delivery (IPD) solution we help project owners and their representatives develop correct technical specifications and deliver the most cost-effective water treatment system design for their projects. As a member of the customer's project planning team we can also provide design and management of related MEP (mechanical, electrical and plumbing) scope of work requirements for the water treatment system.

**PureH<sub>2</sub>O, Ltd.**® designs, builds, sells and services a complete line of equipment and systems for every water treatment application, from multi-stage filtration systems to large Reverse Osmosis plants. Our diverse customer base includes hotels, luxury homes, resorts, marinas, condominium projects, apartment buildings, restaurants and office/industrial buildings.
